Subject: Phonecall from Tom Gast - North Lily Mining Co.

I received a call from Tom Gast this morning regarding his receipt of Mary Ann's recent letter which supported and referenced our earlier Notice of Noncompliance issued on North Lily's Tintic Project. He had a couple of questions and passed on some updated information as follows:

He thought that they had adequately resolved our site security and PCB transformer concerns at our November 10th meeting. I told him I thought that this was true. However, I suggested that they consider moving and/or otherwise securing the transformers elsewhere onsite until they can find an appropriate place for permanent disposal.

He indicated that their response will focus more on the mitigation requirements which we've asked for. He stated they will probably telefax us a copy of their response by 5:00pm Monday (Nov. 22nd) with a hard copy sent over night mail. Their response to DWQ is due on Thanksgiving. They will deliver same by Wednesday.

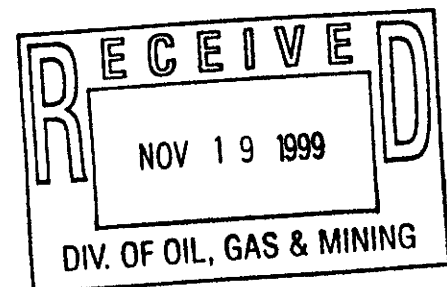

He informed me that their caretaker has been busy patching and repairing the tear in the overflow pond and will be working on the spillway between the barren and overflow pond next.

He also will be correcting a number of isolated areas in the solution ditches where some more impermeable material has sloughed and effectively sealed the ditches causing some of the off-liner ponding problems.

Tom also passed on a phone number for Mr. Spence Hansen of Mammoth Mining Company which we had requested at the meeting. (435) 433-6611

Mr. Gast's telephone number is: (970) 461-0571.
